

#### 6) Status of Attacks on Human beings

- A massive (91%) majority believed that it took just seven days in the enhancement of attacks on human beings

#### 7) Reasons for increased Attacks on Human Beings

- One-fourth of the respondents gave no reason for the increase in the attacks of leopard both on human beings as well as livestock
- Two-thirds of the respondents attributed the increase in attacks on human beings due to the "Search for Food"

#### 8) Statistical Analysis

Chi-Square test was applied on the data to know the relationship among the different variables and to know their impact on each other. Following results were obtained:

- A leopard killed was quickly replaced by another leopard that enhanced attacks on both human beings as well as on livestock
- A significant interdependency was observed between the new arrival of leopard and change in the situation after the killing or trapping of the older leopard
- With the increase in 'sighting frequency', there was a corresponding and significance increase in livestock depredation
