

Certificate

07C10175

This certificate confirms that

IUCN

has compensated a total amount of **7934** tons of CO₂ emissions for its Carbon Offsets for the Congress Barcelona in 2008.

Compensation is realised with a CDM certified project in Sharkia, Egypt. In this project methane emissions are avoided, by composting organic waste which is converted into controlled microbial compost (CMC) that is suitable for organic and conventional farming.
